PURPOSE OF CERTIFICATE

This certificate
Certifies continued compliance of an existing emergency lighting installation

A DETAILS OF THE CLIENT

Occupier / Client

Address

Postcode

B DETAILS OF THE EMERGENCY LIGHTING INSTALLATION

Address of installation

Postcode

Extent of the installation covered by this certificate

Note: The wiring of an existing emergency lighting system should have a current Electrical Installation Condition Report (BS 7671). Record the EICR in Section F.

C DETAILS OF THE ORGANISATION

Trading title

Address

Postcode

D CERTIFICATION

The competent person named below certifies that the emergency lighting installation at the above premises has been inspected and tested in accordance with the Results Schedule on page 2 (and any continuation). To the best of their knowledge and belief, the installation complies at the time of inspection and testing with BS 5266-1:2016, BS EN 50172 / BS 5266-8, and BS EN 1838 where they apply, except as stated in Section E.

COMPETENT PERSON

Additional information has been supplied on page 3

☐ Yes

☐ No

E DETAILS OF DEVIATIONS FROM THE CURRENT CODE OF PRACTICE

Clause No.	Details of deviations (continue on page 3 if needed)

F RELATED REFERENCE DOCUMENTS

Electrical Installation Condition Report No. and/or date

Other documents (if any)

G NEXT INSPECTION

The competent person identified in Section D recommends that this installation is further inspected and tested after an interval of not more than:
Enter interval in accordance with Clause 7.2 of BS EN 50172:2004 / BS 5266-8:2004 and the fire risk assessment.

H PURPOSE OF INSTALLED EMERGENCY LIGHTING SYSTEM

- | | |
|--|---|
| ☐ Emergency escape lighting | ☐ Standby lighting |
| ☐ Escape route lighting | ☐ Partial standby lighting |
| ☐ Open area lighting | ☐ High risk task area lighting |

I EMERGENCY LIGHTING INSTALLATION ARRANGEMENT

- | | |
|--|--|
| ☐ Self-contained emergency luminaires | ☐ Combined emergency luminaires |
| ☐ Central battery system | ☐ Standby generator system |

J CLASSIFICATION OF OPERATION FOR EMERGENCY LIGHTING SYSTEM

Type	Mode	Facilities	Duration
Classification codes (BS EN 60598-2-22): type X/Z · mode 0–6 · facilities A–G (combinable, e.g. AF) · duration minutes. A=test B=rest C=inhibit D=high-risk E=non-replaceable F=auto-test/ATS G=sign			

K RESULTS OF INSPECTION AND TESTING — SCHEDULE OF ITEMS

A full duration test runs the batteries down — the system may not cover another power cut until they recharge. Plan tests for quieter times, or make temporary arrangements. Outcome: tick = satisfactory · X = deviation (record in Section E) · N/A = not applicable.

Clause	Items assessed for compliance	Outcome
4.2	P1 — Plans are available and correct	
5.2.2	P2 — Adequate illumination is provided under test for safe movement on escape routes (1 lux min. on the centre line) and in open areas (0.5 lux min.)	
5.2.8	P3 — Luminaires correctly positioned and oriented as shown on the plans	
Cl. 10	P4 — Original design still valid	
5.2.9	P5 — All escape-route safety signs and other safety signs (e.g. fire-fighting equipment) visible with normal lighting extinguished	
5.2.8	P6 — Correct application and siting of emergency escape lighting	
6.7	P7 — Luminaires conform to BS EN 60598-2-22	
6.7	P8 — Luminaires have an appropriate Ingress Protection rating for their location	
Cl. 8	P9 — Wiring systems comply with the requirements of BS 7671	
8.2	P10 — Fire protection of central wiring systems satisfactory (including cable supports)	
8.2.6	P11 — Emergency escape lighting circuits correctly segregated from other supplies	
8.2.12	P12 — Wiring to emergency lighting supply power sources in a fixed installation; where a specialist plug and socket is used, it is protected against unauthorised interference	
8.3.3	P13 — A sufficient number of suitably located test facilities are provided	
8.3.5	P14 — Central power system output voltage range is compatible with the supply voltage range of the luminaires, taking into account supply cable voltage drop	
12.3	P15 — Luminaires tested and found to operate for their full rated duration	
10.6	P16 — Instructions for operation and maintenance are available	
Cl. 11	P17 — Test records in the log book complete and satisfactory	
10.6/10.7	P18 — Instructions together with a suitable log book showing a satisfactory commissioning test are available for use by the building occupier	
Cl. 12	P19 — Luminaires clean and undamaged with lamps in good condition	
10.7/12	P20 — Building occupier and their staff trained on suitable maintenance, testing and operating procedures, or a current maintenance contract is in place	
12.1	P21 — Evidence of servicing of central battery system (in line with manufacturer procedures); in-house or current maintenance contract is in place	
12.2	P22 — Evidence of servicing of standby generator system (in line with manufacturer procedures); in-house or current maintenance contract is in place	
12.3	P23 — After test, each luminaire charging indicator operates correctly	

L TEST INSTRUMENTS USED

Instrument 1 (light meter) — Model	Serial No.
Instrument 2 (if any) — Model	Serial No.
Where P2 is verified by measurement, instrument details must be recorded. Otherwise state the method in Section O.

Continued deviations

O ALTERNATIVE METHOD USED TO VERIFY ILLUMINATION REQUIREMENT P2

Please keep this certificate with your emergency lighting records.

This certificate records periodic inspection and testing of an existing emergency lighting installation. It supports continued compliance with BS 5266-1:2016 and BS EN 50172 (and related standards where they apply).

Do not use it for a brand-new installation, for alterations or additions, or to verify an undocumented older system against a newer edition of the code — those need a separate completion or verification certificate.

Prepared by the inspecting organisation with Beacon by Monolith. The competent person named on this certificate is responsible for the accuracy of the declaration.

Give this certificate to the Responsible Person for the premises. Keep it with the emergency lighting records and any Electrical Installation Condition Report for the installation. If how the building is used changes, arrange a new fire risk assessment.

Page 1: client, installation, organisation, certification, deviations, related documents, and next inspection interval. Page 2: system purpose, arrangement, classification, results schedule (P1–P23), and test instruments. Later pages: comments, further deviations, and illuminance notes.

Outcome key

- ☒ Assessed satisfactory
- ☒ Deviation (record in Section E or N)
- N/A** Not applicable

Empty outcome boxes mean that item was not assessed on this certificate.
